Executive Summary of Findings

ARCADIS U.S., Inc. (ARCADIS) was retained by Bank of America to conduct a Phase I Environmental Site Assessment of the property located at 5742 West Belmont Avenue in the City of Chicago, Cook County, Illinois (the Site). The Site consists of an approximately 0.15-acre parcel of land improved with a one-story, 5,500-square foot bank branch building. The interior of the building is comprised of a lobby/teller area, offices, a break room and bathrooms. The entire Site area is occupied by the Site building.

The Site was undeveloped in 1924 and has been developed with a commercial building since at least 1949. Previous occupants included Robertson & Company Paints which occupied the Site from at least 1949 to 1957, a sporting goods store and camera shop from approximately 1966 until approximately 1976, and a bank from approximately 1978 until 2009. The Site building was constructed in two phases, with the southern portion being built by 1949; the northern half was constructed in 1964. The Site is abutted to the east and west by commercial properties and to the south by Belmont Street, beyond which are commercial properties. The Site is abutted to the north by an alleyway, beyond which are residential properties.

During November 2010 and April 2011, ARCADIS visited the Site to evaluate the possible presence of petroleum products or hazardous materials/wastes at the Site. The investigation included a reconnaissance of the Site and adjacent properties, background research, and review of available local, state and federal regulatory records regarding the presence of petroleum products or hazardous materials/wastes at or in the vicinity of the Site. The building has been vacant since 2009 and was last operated by Bank of America as a banking center. With the exception of an exposed pipe located outside and near the center of the western wall of the building and similar to a fill or vent pipe for an underground storage tank (UST), no evidence of petroleum or hazardous materials (not including asbestos-containing material) was observed during the ARCADIS site inspections.

ARCADIS also completed a regulatory database record review for the possible presence of petroleum or hazardous materials at, and in the vicinity of, the Site. This review identified permit records from 1949 to install one 1,000 gallon heating oil and one 500 gallon naphtha UST at the Site. No other information was found for the presence or removal of USTs from the Site.

In April 2011, ARCADIS completed a ground penetrating radar (GPR) and electromagnetic (EM) survey of accessible areas of the Site to evaluate for potential USTs and to trace the exposed pipe located on the western building wall. Based on the results of the GPR/EM survey, no evidence of USTs beneath the building or in the area immediately adjacent to the exposed pipe was found.

In March 2008, ARCADIS completed a Limited Asbestos Survey Report that summarized the collection of suspect asbestos-containing material (ACM) taken prior to new equipment installation within the banking center. A total of 48 building material samples were collected and analyzed. Of these, 12" x 12" beige floor tile and mastic in the east storage and server rooms were found to contain 1 to 5% Chrysotile asbestos.

These materials were observed to be in good condition. None of the other materials sampled and analyzed were determined to contain asbestos.

Based on the work completed, the following recognized environmental condition (REC) was identified:

- Historical information available for the Site identified building permits for the installation of one 1,000-gallon fuel oil UST and one 500-gallon naptha UST in February and April 1949, respectively. The permits were issued to Robertson & Company which, according to city directories and a 1949 Sanborn Fire Insurance map, formerly occupied the Site. The locations of the USTs are not shown on the Sanborn maps reviewed for this assessment and no information regarding the locations or removal of these USTs was found in state or local agency files or in the EDR database report. The Site address has not changed according to the historical information reviewed.

The referenced USTs, if installed in 1949, would have likely been located adjacent to the northern limits of the Site building as it existed at that time. The building has since been expanded to the north. A geophysical investigation that included both EM and GPR methods provided no evidence of the presence of USTs at the Site, including beneath the northern building area.

Conclusion

ARCADIS has performed a Phase I Environmental Site Assessment (ESA) in general conformance with the scope and limitations of ASTM Practice E 1527 of 5742 West Belmont Avenue in Chicago, Cook County, Illinois. Any exceptions to, or deletions from, this practice are described in Section 5.3 of this report. This assessment has revealed no evidence of RECs in connection with the Site with the exception of the two USTs permitted for the Site in 1949 when the building was approximately one-half of its current size. Although there is no documentation regarding the location or removal of these tanks, the tanks were likely located along the northern limits of the building as it existed at the time. The building was expanded across this area in 1964. A recent GPR/EM survey at the Site including within this northern building area, provided no evidence to suggest that USTs remain at the Site.

1. Introduction

ARCADIS Inc. (ARCADIS) performed a Phase I Environmental Site Assessment (ESA) of the property located at 5742 West Belmont Avenue in Chicago, Cook County, Illinois ("the Site"). The Site consists of a one-story, 5,500-square foot bank branch building located on an approximately 0.15-acre parcel of land. This Phase I ESA document has been prepared and issued in a format as prescribed by and in accordance with Bank of America requirements.

The Site location is identified on a portion of an annotated topographic map included as Figure 1. The Site layout is detailed on Figure 2. Site photographs are included as Appendix A.

1.1 Purpose

The Phase I ESA has been requested by Bank of America (Client). The purpose of this Phase I ESA is to provide appropriate inquiry into the previous ownership and use of the Site consistent with good commercial and customary practice in an effort to minimize liability. ARCADIS assumes that the information provided by the Client, the site contact, the regulatory database provider, and local government agency is true and reliable.

The objective of the ESA was to identify recognized environmental conditions (RECs) in connection with the property, to the extent feasible pursuant to the processes prescribed in ASTM International E-1527-05 guidelines. The term "REC," as defined by ASTM, is "the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or the material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property." The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

1.2 Involved Parties

This Phase I ESA was conducted for the use and reliance by Bank of America and its successors and assignees, and may be relied upon by such parties. No use of the information contained in this report by others is permissible without receiving prior written authorization to do so from ARCADIS. ARCADIS is not responsible for independent conclusions, opinions, or recommendations made by others or otherwise based on the findings presented in this report.

1.3 Scope of Work

To complete this assessment, ARCADIS' scope of services included the following:

- review of Federal and State regulatory agency databases identified by ASTM for the Site and a selected radius around the Site;
- contact with local environmental regulatory agencies to inquire about environmental conditions at the Site and its vicinity;
- review of the Site history through available ASTM Standard Historical Sources;
- a reconnaissance of the Site to make surficial observations for evidence of recognized environmental conditions;
- a review of adjoining properties to identify the potential use of hazardous materials;
- interviews with people knowledgeable about the Site regarding current and past site usage and facility operations;
- completion of a ground penetrating radar and electromagnetic survey, and,
- preparation of this report.

2. General Site Characteristics

2.1 Site Ownership and Location

The Site is located at 5742 West Belmont Avenue, City of Chicago, Cook County, Illinois. According to the Cook County Assessor's Office, the Site is identified as Parcel Identification number 13-20-432-041-0000 and is owned by Bank of America.

2.2 Adjacent Properties

The Site and surrounding properties are located in a commercial and residential area of Chicago, Illinois.

The use of the adjacent properties at the time of ARCADIS's investigation is summarized as follows:

- North: Asphalt alley, beyond which are single-family residences.

- South: Belmont Avenue, beyond which is a strip-mall and parking lot.
- East: Family Dentist, dental office.
- West: El Gordo, Mexican restaurant and tavern.

2.3 Former Site Uses/Operations

The Site consists of an approximately 0.15-acre parcel of land improved with a one-story 5,500-square foot bank branch building that was constructed in two phases from at least 1949 to 1964. The Site building is of concrete block construction with a brick exterior façade, slab-on-grade concrete foundation, and flat roof. The interior of the building is comprised of a lobby/teller area, offices, a break room, mechanical/storage rooms and bathrooms.

The Site building covers the entire area of the Site. The Site is abutted to the south by Belmont Avenue and to the north by an alley way. Drive-thru teller lanes are not located at the Site building.

The building is heated and cooled by natural gas and electricity provided by Peoples Gas and Commonwealth Edison, respectively. The Site is served by municipal water and sewer systems provided by the City of Chicago.

2.4 Former Site Uses/Operations

The Site was undeveloped in 1924 and was abutted by residences. The Site has been developed with a commercial building since at least 1949. Previous occupants included Robertson & Company Paints from at least 1949 to 1957 and a sporting goods store and camera shop from approximately 1966 until approximately 1976. A bank occupied the Site from approximately 1999 until 2009. The building is currently vacant.

3. Environmental Setting

3.1 Regional Physiographic Conditions

The United States Geological Survey (USGS) 7.5 Minute Topographic Map of the River Forest, Illinois Quadrangle depicts the Site elevation as approximately 620 feet above mean sea level. The Site is relatively flat; however, area topography slopes to the east towards the Chicago River and Lake Michigan.

3.2 Soil Conditions

According to the Natural Resources Conservation Service (NRCS) Soil Survey data, the soils beneath the Site consist of Urban Soils. These soils have been highly disturbed by manmade development and lack characteristics of the original soil.

3.3 Geologic Conditions

Cook County bedrock is overlain by up to 300 feet of unconsolidated glacial deposits. Below the glacial deposits is Silurian dolomite sequence that ranges in thickness from less than ten feet to more than 300 feet on the far eastern side along Lake Michigan. Depth to bedrock at the Site is unknown and no outcrops were observed on the Site.

3.4 Surface Water and Groundwater Characteristics

There are no surface water bodies on or adjacent to the Site. The nearest surface water body is the Chicago River which is located approximately four miles east of the Site, and Lake Michigan which is located approximately six miles east of the Site.

Based on topography and nearby surface water features, groundwater is inferred to flow to the east. Pending site-specific hydrogeologic data to the contrary, groundwater at the Site is anticipated to be Class I Potable Resource Groundwater as listed in 35 Illinois Administrative Code Part 640 Groundwater Quality.

4. Results of Investigation

Mr. John Chitwood and Ms. Morgan Vogt of ARCADIS conducted inspections of the Site on November 3, 2010 and April 26, 2011, respectively. ARCADIS was provided access to accessible interior and exterior areas of the Site, with the exception of the roof. Mr. Chitwood's Site inspection was limited to the exterior of the building. Ms. Vogt oversaw the completion of a GPR/EM survey within the building and adjacent to the northern half of the western side of the outside wall of the building.

4.1 Site Inspection Observations

Underground Storage Tanks (USTs) and Aboveground Storage Tanks (ASTs)

ARCADIS observed an exposed vertical, open and uncapped, two-inch diameter steel pipe adjacent to the exterior side of the western wall of the building. Although the purpose of this pipe is unknown, it appears similar to a UST fill or vent pipe. The suspect pipe is located near the center of the west side of the building, is metal, is approximately two-inches in diameter and rises approximately three feet above the ground surface. No other evidence of USTs (e.g., fill pipes, vent pipes, etc.) or ASTs was observed at the Site.

Hazardous substances and petroleum products

ARCADIS did not observe the use or storage of hazardous substances or petroleum products at the Site.

Unlabeled Drums/Containers

ARCADIS did not observe unlabeled drums or containers at the Site.

Staining/Corrosion

ARCADIS did not observe stained or corroded surfaces at the Site.

Stressed Vegetation

ARCADIS did not observe evidence of stressed vegetation at the Site.

Electrical Transformers/Equipment

ARCADIS observed three pole-mounted transformers along the alley abutting the Site to the north. The transformers, which are owned by Commonwealth Edison, were not labeled as being classified as "Non-PCB." ARCADIS did not observe evidence of leaks or staining on or beneath the transformers.

ARCADIS did not observe other electrical transformers or hydraulic equipment at the Site.

Drywells, Sumps, Catch Basins and Floor Drains

Floor drains were located in the storage room and utility closet at the Site. ARCADIS did not observe other drywells, sumps, catch basins or floor drains at the Site.

Pits, Ponds, Lagoons and Pools of Liquid

ARCADIS did not observe pits, ponds, lagoons or pools of liquid at the Site.

Wells

ARCADIS did not observe evidence of water supply wells, irrigation wells, or other wells at the Site.

Solid Waste

No solid waste dumpsters were observed on-Site at the time of our inspection.

ARCADIS did not observe dumping of solid waste or construction debris on the Site.

Process Wastewater

ARCADIS did not observe the generation or discharge of process wastewater at the Site.

Septic Systems/Sewer

The Site is connected to the City of Chicago sanitary sewer system. ARCADIS did not observe evidence of an on-site septic system.

Source of Potable Water

The Site is connected to the public water system supplied and maintained by the City of Chicago.

Heating and Cooling Systems

The Site building is heated and cooled by roof-mounted package units powered by electricity.

Other Observations

Other than a slight musty odor observed in the building in 2011, no odors were noted upon entry or while working in the building. No other significant interior or exterior observations were noted during the site inspection.

4.2 Standard Environmental Record Sources

ARCADIS contracted with Environmental Data Resources, Inc. (EDR) to conduct a search of state and federal regulatory databases that provide information on the regulatory status of a property and incidents involving the use, storage, spills or transportation of hazardous materials and petroleum products at properties located within the radii specified by ASTM E 1527-05. A compilation of Federal and State database listings is provided in the May 19, 2011, EDR Radius Map Report in Appendix B. ARCADIS also utilized and reviewed other historical records, including aerial photographs, topographic maps, and city directories that were obtained through a 2009 Phase I ESA prepared by LFR Inc., an ARCADIS company (LFR). The prior Phase I ESA is described further in Section 4.4.

The Site was not listed in the databases searched by EDR. Based upon their distance, regulatory status and/or inferred direction of groundwater flow, none of the off-site properties identified by the database search represent an issue of environmental concern.

4.3 Results of Site History/Land Use Review

4.3.1 Personnel Site Interviews

Interview with Owner/Key Site Manager

In June 2011, ARCADIS interviewed Mr. Mo Momcilovic, the Site's Property Manager of Jones Lang Lasalle. Mr. Momcilovic was not aware of environmental issues associated with the property.

Interviews with Local Government Officials

ARCADIS visited various municipal offices to review available records on file for the Site. Refer to the section below for additional information.

4.3.2 Municipal File Review

ARCADIS submitted a FOIA request for information on the Site on June 7, 2011 and requested documents on file for the Site in the following departments: City of Chicago Building Department, Cook County Health Department, and the Chicago Department of the Environment. Additionally, ARCADIS submitted a FOIA request on June 7, 2011 to the Illinois Environmental Protection Agency (IEPA) Bureau of Land, Bureau of Air, Bureau of Water, and Office of Emergency Response, and the Office of the State Fire Marshal (OSFM) for information on file for the Site.

The IEPA did not have records pertaining to the Site. In the 2009 Phase I, the Chicago Department of the Environment provided copies of two building permits for the installation of one 1,000-gallon fuel oil UST and one 500-gallon naphtha UST in February and April 1949, respectively. The permits were issued to Robertson & Company, the Site occupant at that time. The OSFM did not have permit records for installation or removal of the USTs. None of the agencies maintained records of releases or environmental incidents for the Site. A copy of the UST installation permits is included in Appendix C.

4.3.3 Aerial Photographs

ARCADIS reviewed aerial photographs provided by EDR for the years 1951, 1963, 1972, 1983, 1988, 1994, 2005 and 2006. The review of these aerial photographs identified the following information:

1951: The southern portion of the Site is occupied by a commercial-type building. The northern portion of the Site appears undeveloped. Surrounding the Site are various commercial and residential properties.

1963: Similar to the 1951 photograph.

1972: Similar to the 1963 photograph except that an addition to the building is visible and covering the northern half of the Site.

1983: Due to the poor quality of the aerial photograph, details of the Site and surrounding properties are difficult to determine. The Site appears to be similar to the 1972 photograph.

1988: The Site is occupied by a commercial-type building. Surrounding the Site are various commercial and residential properties.

1994: Similar to the 1988 photograph.

2005/2006: The Site and adjacent properties generally appear to be as observed during ARCADIS's recent Site reconnaissance.

Refer to Appendix D for copies of the foregoing aerial photographs obtained from EDR.

4.3.4 Fire Insurance Maps

ARCADIS reviewed Sanborn Fire Insurance (Sanborn) maps provided by EDR for the years 1924, 1951, 1975, 1987, 1991, 1993, 2002, and 2004. The review of these Sanborn maps identified the following information:

1924: The Site appears to be undeveloped. One building identified as a dwelling abuts to the west and two small storage structures abut to the northwest. Undeveloped property abuts to the north and east. Belmont Avenue abuts the Site to the south, across which is undeveloped property.

1951: The southern portion of the Site is occupied by a commercial building labeled as "wallpaper and paints" and the northern portion of the Site is vacant. There is no evidence of the fuel oil or naphtha USTs at the Site. The Site address is 5742-5744 Belmont Avenue. Several buildings identified as stores abut the Site to the east and west. A dwelling abuts to the northwest and undeveloped land abuts to the north. A filling station with eight gasoline tanks is located to the south of the Site, across Belmont Avenue.

1975: The entire Site area is occupied by a building identified as a store (south half) and storage (north half). The Site is surrounded by mixed commercial and residential properties. The filling station no longer appears across Belmont Avenue to the south of the Site.

1987: The Site and surrounding properties are similar to the 1975 map.

1991: The Site and surrounding properties are similar to the 1987 map.

1993: The Site and surrounding properties are similar to the 1991 map.

2002: The Site and surrounding properties are similar to the 1993 map.

2004: The Site and surrounding properties are similar to the 2002 map.

Refer to Appendix D for copies of the foregoing Sanborn maps obtained from EDR.

4.3.5 City Directories

ARCADIS contracted EDR to conduct a city directory search for the Site. EDR reviewed city directories for the Site for the years 1923-2005 in approximately five-year intervals (as available). According to the EDR report, the Site address was first listed in 1951. A summary of the city directory information follows:

1941: The Site is not listed. Surrounding listings are various residential and commercial uses, including a service station adjacent to the south of the Site.

1947: The Site is not listed. Surrounding listings are various residential and commercial uses, including a service station adjacent to the south of the Site.

1951: The Site is listed as Robertson & Company Paints General Offices. Surrounding listings are various residential and commercial uses.

1957: The Site is listed as Robertson & Company Paints General Offices. Surrounding listings are various residential and commercial uses.

1966: The Site is listed as Schulkin Sporting Goods and Camera Shop. Surrounding listings are various residential and commercial uses.

1971: The Site is not listed. Surrounding listings are various residential and commercial uses.

1976: The Site is listed as Schulkin Sporting Goods and Camera Shop. Surrounding listings are various residential and commercial uses.

1978: The Site is as Schulkin Sporting Goods and Craigin Federal Savings and Loan. Surrounding listings are various residential and commercial uses.

1982: The Site is listed as Craigin Federal Savings and Loan. Surrounding listings are various residential and commercial uses.

- 1984: The Site is listed as Craigin Federal Savings and Loan. Surrounding listings are various residential and commercial uses.
- 1988: The Site is listed as Craigin Federal Savings and Loan. Surrounding listings are various residential and commercial uses.
- 1991: The Site is listed as Craigin Federal Savings and Loan. Surrounding listings are various residential and commercial uses.
- 1995: The Site is listed as Craigin Federal Savings and Loan. Surrounding listings are various residential and commercial uses.
- 1999: The Site is listed as LaSalle Bank. Surrounding listings are various residential and commercial uses.
- 2005: The Site is not listed. Surrounding listings are various residential and commercial uses.

The EDR City Directory Abstract is included in Appendix D.

4.3.6 Topographic Maps

Topographic maps were obtained from EDR for the years 1901, 1928, 1948, 1953, 1963, 1972, 1978, 1993 and 1997. All the topo maps depict the Site and surrounding properties as being in an urban area.

The EDR Topographic Map report is included in Appendix D.

4.4 Synopsis of Previous Environmental Investigations

ARCADIS reviewed a previous Phase I ESA of the Site that was prepared by LFR, dated September 8, 2009. According to the report, the conditions of the Site and vicinity were similar to conditions observed by ARCADIS in 2010 and 2011.

Based on the 2009 Phase I ESA findings, LFR concluded that the assessment revealed no evidence of RECs in connection with the Site with the exception of the permit records for the installation of two USTs at the Site in 1949. Because no removal documentation was obtained, LFR noted that it is possible that the USTs may exist at the Site; however, the tanks may be located beneath the current Site building.

4.5 User Provided Information

Mr. Mo Momcilovic, Property Manager of Jones Lang LaSalle, completed a User Questionnaire on behalf of Bank of America. The User Questionnaire is provided in Appendix E.

4.5.1 Title Records

Title records were not provided to ARCADIS for review.

4.5.2 Environmental Liens or Activity and Use Limitations

The representative of the client was asked the following questions as part of the assessment:

- Are you aware of any environmental cleanup liens that have been filed or recorded against the Site under federal, tribal, state, or local law? **Answer:** No
- Are you aware of any activity or land use limitations, such as engineering controls, land use restrictions, or institutional controls, that are in place at the Site and/or have been filed or recorded against the Site in a registry under federal, tribal, state, or local law? **Answer:** No

4.5.3 Specialized Knowledge

The representative of the Client was asked the following questions as part of the assessment:

- Do you have any specialized knowledge or experience related to the Site or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the Site or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business? **Answer:** No
- Are you aware of commonly known or reasonably ascertainable information about the Site that would help the environmental professional to identify conditions indicative of releases or threatened releases? **Answer:** No
- Do you know the past uses of the Site? **Answer:** No
- Do you know of specific chemicals that are present or once were present at the Site? **Answer:** No
- Do you know of spills or other chemical releases that have occurred at the Site? **Answer:** No
- Do you know of any environmental cleanups that have occurred at the Site? **Answer:** No
- Do you know of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the Site? **Answer:** No

- Do you know of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the Site? **Answer:** No
- Do you know of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products? **Answer:** No

4.5.4 Commonly Known or Reasonably Ascertainable Information

The representative of the Client was asked the following question as part of the assessment:

- Based on your knowledge and experience related to the Site, are there any obvious indicators that point to the presence or likely presence of contamination at the Site? **Answer:** No

4.5.5 Valuation Reduction for Environmental Issues

Since Bank of America or related subsidiary is the current owner of the Site, Bank of America has not conducted an analysis of a hypothetical prospective purchase price.

4.5.6 Owner, Property Manager and Occupant Information

According to the Cook County Assessor's Office, the Site is owned by Bank of America. The Site is currently occupied by Bank of America.

4.5.7 Reason for Performing Phase I

The Phase I ESA is being performed to evaluate the present environmental status of the Site.

4.5.8 Other Information

No other pertinent information is available.

4.6 Results of Limited ACM Screening

ARCADIS reviewed a Limited Asbestos Survey Report completed by LFR, dated March 15, 2008 that summarized the collection of suspect ACM taken prior to new equipment installation within the banking center. A total of 48 samples of ceiling tile, gypsum board, joint compound, wallpaper glue, cove base and mastic, carpet mastic, 12" x 12" beige and brown ceramic floor tile, 12" x 12" beige floor tile and mastic, 18" x 18" beige and tan floor tile and mastic, 2" x 2" beige ceramic floor tile, plaster, brick mortar, silver and black vapor barrier, and HVAC duct insulation. The 12" x 12" beige floor tile and mastic in the east storage room

and server room were found to have 1-5% Chrysotile. None of the other materials sampled and analyzed contained asbestos.

A copy of the asbestos survey report is included in Appendix F.

4.7 Results of Ground Penetrating Radar and Electromagnetic Investigation

To evaluate the Site for potential USTs due to the reported historical permitting of two USTs, as well as to further assess the exposed pipe of unknown use on the western side of the building, ARCADIS completed a ground penetrating radar (GPR) and limited electromagnetic (EM) survey at the Site on April 26, 2011.

GPR is a geophysical method that detects interfaces between subsurface materials having differing dielectric constants. The GPR system consists of signal transmitting and receiving antennas; a digital control unit that both generates and digitally records the transmission and response signal waves; and a color video monitor to view data as it is collected in the field. EM utility locators are used for tracing metallic pipes and utility cables. The utility locators consist of a separate transmitter and receiver. The transmitter emits a radio frequency EM field that induces secondary fields in nearby metallic pipes and utility cables which can be detected and traced using the receiver. The field GPR and EM survey tasks were completed by Fibertec Environmental Services (Fibertec) of Brighton, Michigan. Fibertec utilized a GPR system manufactured by Geophysical Survey Systems, Inc. (GSSI) GPR with a 400 MHz antenna; a 3M Dynatel handheld pipe and utility locator was used for the EM survey.

The GPR survey was performed throughout all accessible interior building areas both in the original southern portion of the building and the northern addition. Furniture limited access in some rooms; however, all rooms were surveyed to the fullest extent possible. An approximate three-foot grid spacing was used in most open areas and parallel transects were used in the smaller rooms. GPR scans were performed both outside and inside the building in the immediate vicinity of the pipe along the building's western exterior wall.

The building's electrical and communication control room is located immediately inside the building adjacent to the assessed pipe (see Figure 3). The historical Site maps show this room area to be a small extension to the original building and it appears that it may have once served as the boiler room. A brick chimney was observed in this area at the time of ARCADIS' visit. ARCADIS subsequently focused additional GPR scans in the area of the electrical and northern-abutting stock rooms.

Examples of the GPR data associated with transects recorded in these areas and from other interior locations are provided in Appendix G. The locations of where data records were recorded are depicted on Figure 3. Note, the GPR data can be interpreted in real time in the field and therefore not all transects were recorded. The EM survey was also performed in 'real-time' and no data recordings were made.

GPR Survey Results

Based on the Fibertec's interpretation of the GPR data, no anomalies characteristic of an UST system (e.g., tank, piping, or excavation) were identified under the building or in the outdoor area immediately around the suspect pipe. Fibertec identified and interpreted a linear GPR anomaly that traverses a north-south line through the western half of the building as indicative of a subsurface utility. Based on the alignment of this anomaly with two cleanout ports in the building floor, both Fibertec and ARCADIS interpret this anomaly as an underground sewer line. Figure 3 depicts the approximate location of this suspected sewer line.

EM Survey Results

Fibertec could not detect any traceable signals in the subsurface around the suspect pipe. However, as noted above, the GPR survey did not provide evidence that this pipe extends beneath or away from the building.

5. Findings and Conclusions

5.1 Known or Suspect RECs

Based upon the information obtained during the Phase I ESA, this assessment has revealed the following REC in connection with the Site:

- Historical information available for the Site identified building permits for the installation of one 1,000-gallon fuel oil underground storage tank (UST) and one 500-gallon naphtha UST in February and April 1949, respectively. The permits were issued to Robertson & Company which, according to city directories and a 1949 Sanborn Fire Insurance map, formerly occupied the Site. The locations of the USTs are not shown on the Sanborn maps reviewed for this assessment and no information regarding the locations or removal of these USTs was found in state or local agency files or in the EDR database report. The Site address has not changed according to the historical information reviewed.

The referenced USTs, if installed in 1949, would have likely been located adjacent to the northern limits of the Site building as it existed at that time. The building has since been expanded to the north across this area. A geophysical investigation that included both EM and GPR methods provided no evidence of the presence of USTs at the Site, including beneath this northern building area.

5.2 De minimis Conditions

No *de minimis* conditions were identified during this assessment.

5.3 Deviations/Data Gaps

The report deviates from the ASTM E1527-05 standard in that it has been prepared in accordance with a table of contents recommended by Bank of America. The informational content of the report and the objective of the Phase I ESA generally conform to the standard.

Not being able to trace the use of the property back to 1940, or its first developed use, whichever is earlier represents a data gap as defined by ASTM E1527-05. However, ARCADIS opines that such data gaps do not prevent the ability of ARCADIS to render the following conclusion.

5.4 Conclusions

ARCADIS has performed a Phase I Environmental Site Assessment (ESA) in general conformance with the scope and limitations of ASTM Practice E 1527 of 5742 West Belmont Avenue in Chicago, Cook County, Illinois. Any exceptions to, or deletions from, this practice are described in Section 5.3 of this report. This assessment has revealed no evidence of RECs in connection with the Site with the exception of the two USTs permitted for the Site in 1949. There is no removal documentation and it is possible that the USTs were installed and not removed. However, based on the results of a GPR/EM survey, no evidence of USTs beneath the building was found.

6. Limitations

The opinions and recommendations presented in this report are based upon the scope of services, information obtained through the performance of the services, and the schedule as agreed upon by ARCADIS and the original party for whom this report was originally prepared. This report is an instrument of professional service and was prepared in accordance with the generally accepted standards and level of skill and care under similar conditions and circumstances established by the environmental consulting industry. To the extent that ARCADIS relied upon any information prepared by other parties not under contract to ARCADIS, ARCADIS makes no representation as to the accuracy or completeness of such information. Only the party for whom this report was originally prepared, and other specifically named parties, may make use of and rely upon the information in this report, in its entirety, for a period not to exceed 180 days in accordance with the American Society for Testing and Materials' (ASTM's) "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" ASTM Designation E 1527-00 dated May 10, 2000, ASTM's "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" ASTM Designation E 1527-05 dated November 1, 2005, and/or the Code of Federal Regulations (CFR) 40CFR Part 312 "Standards and Practices for All Appropriate Inquiries: Final Rule" dated November 1, 2005. After 180 days and prior to using the information contained herein, the report should be updated in accordance with ASTM Standards and Federal regulations.

The findings presented in this report apply solely to site conditions existing at the time when ARCADIS' assessment was performed. It must be recognized, however, that an Environmental Site Assessment ("ESA") is intended for the purpose of evaluating the potential for contamination through limited research and investigative activities and in no way represents a conclusive or complete site characterization. Conditions in other parts of the project site may vary from those at the locations where data were collected. ARCADIS's ability to interpret investigation results is related to the availability of the data and the extent of the investigation activities. As such, 100% confidence in ESA conclusions cannot reasonably be achieved.

ARCADIS, therefore, does not provide any guarantees, certifications, or warranties (express or implied) that a property is free from environmental contamination. Furthermore, nothing contained in this document shall relieve any other party of its responsibility to abide by contract documents and all applicable laws, codes, regulations, or standards.

8. Statement of Environmental Professional(s)

We declare that, to the best of our professional knowledge and belief, we meet the definition of environmental professional as defined in §312.10 of 40 C.F.R. 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 C.F.R. Part 312.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/11/2011 has revealed that there are 4

EXECUTIVE SUMMARY

RCRA-SQG sites within approximately 0.25 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/11/2011 has revealed that there are 2 RCRA-CESQG sites within approximately 0.25 miles of the target property.

LUST TRUST: In case sufficient funds are not available in the Underground Storage Tank Fund, requests for payment are entered on the Payment Priority List by "queue date" order. As required by the Environmental Protection Act, the queue date is the date that a complete request for partial or final payment was received by the Agency. The queue date is "officially" confirmed at the end of the payment review process when a Final Decision Letter is sent to the site owner.

A review of the LUST TRUST list, as provided by EDR, and dated 01/14/2011 has revealed that there is 1 LUST TRUST site within approximately 0.5 miles of the target property.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

EDR Historical Auto Stations: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc.

A review of the EDR Historical Auto Stations list, as provided by EDR, has revealed that there are 2 EDR Historical Auto Stations sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR Historical Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc.

A review of the EDR Historical Cleaners list, as provided by EDR, has revealed that there is 1 EDR Historical Cleaners site within approximately 0.25 miles of the target property.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

FINDS:

Registry ID: 110007552497

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D000
Waste name: Not Defined

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F002
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Violation Status: No violations found

Environmental Interest/Information System

ACES (Illinois - Agency Compliance And Enforcement System) is the Illinois EPA Project to facilitate the permitting operations

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/31/2010	Source: EPA
Date Data Arrived at EDR: 01/13/2011	Telephone: N/A
Date Made Active in Reports: 01/28/2011	Last EDR Contact: 04/13/2011
Number of Days to Update: 15	Next Scheduled EDR Contact: 07/25/2011
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267

Number of Days to Update: 56	Next Scheduled EDR Contact: 08/29/2011
	Data Release Frequency: No Update Planned

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/31/2010	Source: EPA
Date Data Arrived at EDR: 01/13/2011	Telephone: N/A
Date Made Active in Reports: 01/28/2011	Last EDR Contact: 04/13/2011
Number of Days to Update: 15	Next Scheduled EDR Contact: 07/25/2011
	Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/25/2011	Source: EPA
Date Data Arrived at EDR: 03/01/2011	Telephone: 703-412-9810
Date Made Active in Reports: 05/02/2011	Last EDR Contact: 04/29/2011
Number of Days to Update: 62	Next Scheduled EDR Contact: 06/13/2011
	Data Release Frequency: Quarterly

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA's Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 12/10/2010	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/11/2011	Telephone: 703-603-8704
Date Made Active in Reports: 02/16/2011	Last EDR Contact: 04/15/2011
Number of Days to Update: 36	Next Scheduled EDR Contact: 07/25/2011
	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 02/25/2011	Source: EPA
Date Data Arrived at EDR: 03/01/2011	Telephone: 703-412-9810

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 03/11/2011

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/11/2011
Date Data Arrived at EDR: 04/05/2011

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 03/11/2011
Date Data Arrived at EDR: 04/05/2011

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 01/05/2011	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/14/2011	Telephone: 703-603-0695
Date Made Active in Reports: 01/28/2011	Last EDR Contact: 03/14/2011
Number of Days to Update: 14	Next Scheduled EDR Contact: 06/27/2011
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 01/05/2011	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/14/2011	Telephone: 703-603-0695
Date Made Active in Reports: 01/28/2011	Last EDR Contact: 03/14/2011
Number of Days to Update: 14	Next Scheduled EDR Contact: 06/27/2011
	Data Release Frequency: Varies

Federal ERNS list

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 12/31/2010	Source: National Response Center, United States Coast Guard
Date Data Arrived at EDR: 01/07/2011	Telephone: 202-267-2180

Number of Days to Update: 73	Next Scheduled EDR Contact: 07/18/2011
	Data Release Frequency: Annually

State- and tribal - equivalent CERCLIS

SSU: State Sites Unit Listing

The State Response Action Program database identifies the status of all sites under the responsibility of the Illinois EPA's State Sites Unit.

Date of Government Version: 03/08/2011	Source: Illinois Environmental Protection Agency
Date Data Arrived at EDR: 03/16/2011	Telephone: 217-524-4826
Date Made Active in Reports: 04/06/2011	Last EDR Contact: 05/02/2011
Number of Days to Update: 21	Next Scheduled EDR Contact: 08/15/2011
	Data Release Frequency: Semi-Annually

State and tribal landfill and/or solid waste disposal site lists

LF WMRC: Waste Management & Research Center Landfill Database

The Waste Management & Research Center Landfill Database includes records from the Department of Public Health, Department of Mines & Minerals, Illinois Environmental Protection Agency, State Geological Survey, Northeastern Illinois Planning Commission and Pollution Control Board.

Date of Government Version: 12/31/2001	Source: Department of Natural Resources
Date Data Arrived at EDR: 10/06/2006	Telephone: 217-333-8940
Date Made Active in Reports: 11/06/2006	Last EDR Contact: 09/18/2009
Number of Days to Update: 31	Next Scheduled EDR Contact: 12/28/2009
	Data Release Frequency: No Update Planned

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SWF/LF: Available Disposal for Solid Waste in Illinois - Solid Waste Landfills Subject to State Surcharge

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

Date of Government Version: 12/31/2008
Date Data Arrived at EDR: 03/02/2010
Date Made Active in Reports: 04/07/2010
Number of Days to Update: 36

Next Scheduled EDR Contact: 08/15/2011
Data Release Frequency: Annually

LF SPECIAL WASTE: Special Waste Site List

These landfills, as of January 1, 1990, accept non-hazardous special waste pursuant to the Illinois EPA Non-Hazardous Special Waste Definition. List A includes landfills that may receive any non-hazardous waste, Non-Regional Pollution Control Facilities are so noted. List B includes landfills designed to receive specific non-hazardous wastes. List B landfills are designated as a Regional Pollution Control Facility by RPCF, or Non-Regional Pollution Control Facility by Non-RPCF.

Date of Government Version: 01/01/1990

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank Sites

Leaking Underground Storage Tank Incident Reports. LUST records contain an inventory of reported leaking underground storage tank incidents. Not all states maintain these records, and the information stored varies by state.

Date of Government Version: 03/03/2011
Date Data Arrived at EDR: 03/10/2011
Date Made Active in Reports: 04/06/2011
Number of Days to Update: 27

Source: Illinois Environmental Protection Agency
Telephone: 217-782-6762
Last EDR Contact: 05/03/2011
Next Scheduled EDR Contact: 08/15/2011
Data Release Frequency: Semi-Annually

LUST TRUST: Underground Storage Tank Fund Payment Priority List

In case sufficient funds are not available in the Underground Storage Tank Fund, requests for payment are entered on the Payment Priority List by "queue date" order. As required by the Environmental Protection Act, the queue date is the date that a complete request for partial or final payment was received by the Agency. The queue date is "officially" confirmed at the end of the payment review process when a Final Decision Letter is sent to the site owner.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

Next Scheduled EDR Contact: 06/13/2011
Data Release Frequency: Quarterly

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

FINDS: Facility Index System/Facility Registry System

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 04/14/2010	Source: EPA
Date Data Arrived at EDR: 04/16/2010	Telephone: (312) 353-2000
Date Made Active in Reports: 05/27/2010	Last EDR Contact: 03/14/2011
Number of Days to Update: 41	Next Scheduled EDR Contact: 06/27/2011
	Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County
COOK, IL

FEMA Flood
Electronic Data
YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 17031C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property
RIVER FOREST

NWI Electronic
Data Coverage
YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
1	0 - 1/8 Mile SW	S
3	1/4 - 1/2 Mile East	Not Reported
4	1/4 - 1/2 Mile NNW	Not Reported
7	1/2 - 1 Mile SSW	Not Reported

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Paleozoic
System: Silurian
Series: Middle Silurian (Niagoaran)
Code: S2 *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBANLAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Bedrock Max: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	60 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
fine sandy loam
loam
fine sand

Surficial Soil Types: silt loam
fine sandy loam
loam
fine sand

Shallow Soil Types: sandy loam

Deeper Soil Types: silt loam
sand
loamy sand
loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2009 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

2009 Enhancements to EDR City Directory Abstract

New for 2009, the EDR City Directory Abstract has been enhanced with additional information and features. These enhancements will make your city directory research process more efficient, flexible, and insightful than ever before. The enhancements will improve the options for selecting adjoining properties, and will speed up your review of the report.

City Directory Report. Three important enhancements have been made to the EDR City Directory Abstract:

1. *Executive Summary.* The report begins with an Executive Summary that lists the sources consulted in the preparation of the report. Where available, a parcel map is also provided within the report, showing the locations of properties researched.
2. *Page Images.* Where available, the actual page source images will be included in the Appendix, so that you can review them for information that may provide additional insight. EDR has copyright permission to include these images.
3. *Findings Listed by Location.* Another useful enhancement is that findings are now grouped by address. This will significantly reduce the time you need to review your abstracts. Findings are provided under each property address, listed in reverse chronological order and referencing the source for each entry.

Options for Selecting Adjoining Properties. Ensuring that the right adjoining property addresses are searched is one of the biggest challenges that environmental professionals face when conducting city directory historical research. EDR's new enhancements make it easier for you to meet this challenge. Now, when you place an order for the EDR City Directory Abstract, you have the following choices for determining which addresses should be researched.

1. *You Select Addresses and EDR Selects Addresses.* Use the "Add Another Address" feature to specify the addresses you want researched. Your selections will be supplemented by addresses selected by EDR researchers using our established research methods. Where available, a digital map will be shown, indicating property lines overlaid on a color aerial photo and their corresponding addresses. Simply use the address list below the map to check off which properties shown on the map you want to include. You may also select other addresses using the "Add Another Address" feature at the bottom of the list.
2. *EDR Selects Addresses.* Choose this method if you want EDR's researchers to select the addresses to be researched for you, using our established research methods.
3. *You Select Addresses.* Use this method for research based solely on the addresses you select or enter into the system.
4. *Hold City Directory Research Option.* If you choose to select your own adjoining addresses, you may pause production of your EDR City Directory Abstract report until you have had a chance to look at your other EDR reports and sources. Sources for property addresses include: your Certified Sanborn Map Report may show you the location of property addresses; the new EDR Property Tax Map Report may show the location of property addresses; and your field research can supplement these sources with additional address information. To use this capability, simply click "Hold City Directory research" box under "Other Options" at the bottom of the page. Once you have determined what addresses you want researched, go to your EDR Order Status page, select the EDR City Directory Abstract, and enter the addresses and submit for production.

Questions? Contact your EDR representative at 800-352-0050. For more information about all of EDR's 2009 report and service enhancements, visit www.edrnet.com/2009enhancements

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1923 through 2005. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 100 feet of the target property.

A summary of the information obtained is provided in the text of this report.

User Provided Information/Site
Records

Phase I Environmental Site Assessment Questionnaire

(User Provided Information Questionnaire)

Date: 6/6/11
Site Name: BELMONT & CENTRAL Your Name: MO MONELOVE
Site Location: 5742 W. BELMONT
Your Title: PROPERTY MANAGER Property Manager MO MONELOVE
Relationship to Site: ☐ Owner ☐ Occupant ☐ Purchaser ☒ Other
Length of Time Associated with Site: _____

Please review and complete this questionnaire which will assist ARCADIS in completing our site assessment. If sufficient space is not provided, please complete your response on a separate sheet of paper and attach it to this questionnaire.

1. Are you aware of any environmental cleanup liens against the Site that are filed or recorded under federal, tribal, state or local law?

☐ Yes ☒ No ☐ Unknown ☐ N/A

If Yes, please explain: _____

2. Are you aware of any activity or land use limitations, such as engineering controls (for contaminant control), land use restrictions or institutional controls, that are in place at the Site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

☐ Yes ☒ No ☐ Unknown ☐ N/A

If Yes, please explain: _____

3. Do you have any specialized knowledge or experience related to the Site or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the Site or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

☐ Yes ☒ No ☐ Unknown ☐ N/A

If Yes, please explain: _____

ARCADIS

4. Are you aware of commonly known or reasonably ascertainable information about the Site that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user,

a) Do you know the past uses of the Site?

☐ Yes ☒ No ☐ Unknown ☐ N/A

If Yes, please explain: _____

b) Do you know of specific chemicals that are present or once were present at the Site?

☐ Yes ☒ No ☐ Unknown ☐ N/A

If Yes, please explain: _____

c) Do you know of chemical spills that have taken place at the Site?

☐ Yes ☒ No ☐ Unknown ☐ N/A

If Yes, please explain: _____

d) Do you know of any environmental cleanups that have taken place at the Site?

☐ Yes ☒ No ☐ Unknown ☐ N/A

If Yes, please explain: _____

e) Do you know if any fill material has been imported to the Site?

☐ Yes ☒ No ☐ Unknown ☐ N/A

If Yes, please explain: _____

ARCADIS

5. Do you know of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the Site?

☐ Yes

☒ No

☐ Unknown

☐ N/A

If Yes, please explain: _____

6. Do you know of any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on or from the Site?

☐ Yes

☒ No

☐ Unknown

☐ N/A

If Yes, please explain: _____

7. Do you know of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products at the Site?

☐ Yes

☒ No

☐ Unknown

☐ N/A

If Yes, please explain: _____

8. Based on your knowledge and experience related to the Site are there any obvious indicators that point to the presence or likely presence of contamination at the Site?

☐ Yes

☒ No

☐ Unknown

☐ N/A

If Yes, please explain: _____

9. Does the Site's purchase price reasonably reflect the fair market value of the property?

☐ Yes

☐ No

☒ Unknown

☐ N/A

If No, do you know the reason for lower purchase price? Is it possible that the lower purchase price is because of contamination known or believed to be present at the Site?

☐ Yes

☐ No

☒ Unknown

☐ N/A

If Yes, please explain: _____

ENVIRONMENTAL MANAGEMENT & CONSULTING ENGINEERING

March 15, 2008

Project No. 009-11638-00

Mr. Dennis McInerney
Bank of America
Corporate Workplace Environmental Risk Department
Mailstop CT2-545-02-01
200 Glastonbury Blvd.
Glastonbury, CT 06033

Re: Technology/Equipment Installation Asbestos Survey
5742 West Belmont Avenue (Belmont/Central)
Chicago, IL 60634
Mail Code: IL4-311

Dear Mr. McInerney:

LFR Inc. (LFR) conducted a Comprehensive Asbestos Survey at the above-referenced retail banking facility (Site) for Bank of America. The focus of the survey was to identify if specific building materials with potential to be disturbed during the installation of new equipment are asbestos-containing building materials (ACBMs). Background information on the Site, a summary of the asbestos survey as well as the inspector's certification and license are provided below.

Background Information

The Site is a retail banking facility in a single-story stand-alone structure situated in a commercial/residential area of Chicago, Illinois. The date of the building construction is unknown. There are approximately 6,250 square feet of floor space in the banking center. Construction of the Site building appeared to be wood frame with a brick exterior façade, glass windows and doors. Interior finished walls are primarily drywall with associated joint compound, finished with paint or wallpaper. The perimeter walls of the building are plaster. Ceilings are comprised of 2'x 2' suspended acoustic ceiling tiles, above which is plaster. The flooring is a mixture of vinyl floor tile with mastic, ceramic tile with associated grout and adhesive and carpeting overlaying the sub-floor. The Thermal System Insulation (TSI) observed in the building was fiberglass pipe insulation. Spray-on fireproofing was not observed at the site.

Asbestos Survey

The survey was performed on February 25, 2008 by Mr. Benito Castillo of LFR. A copy of Mr. Castillo's Illinois Asbestos Inspector License and current Certificate are provided in Attachment A. During the inspection, a total of 19 homogeneous applications were identified for sampling and a total of 48 bulk samples were collected and submitted for laboratory analyses. The results of the asbestos survey are presented on the Homogenous Application Table in Attachment B.

630 Tollgate Road, Suite D
Evanston, Illinois 60123
Offices Nationwide

847.695.8855 m
847.695.7790 f
www.lfr.com

The bulk sample laboratory data package and chain of custody are presented in Attachment C. A site plan denoting sample collection locations is presented in Attachment D and photographs of the homogenous applications are presented in Attachment E. The asbestos inspection Limitations and Service Constraints are presented in Attachment F.

During the survey, the following areas, which were intended to be included in the survey, were not accessible to LFR:

- Wall cavities
- The ceramic floor tile and associated grout/mastic in the restrooms were not sampled due to concerns for occupant safety and the potential to severely damage the tile.

Certification

The Comprehensive Asbestos Survey described herein was conducted by the undersigned of LFR. LFR's investigation consisted solely of the activities described herein and is subject to the Limitations and Service Constraints in Appendix F.

Sincerely,

A handwritten signature in black ink, appearing to read 'James J. Young', written in a cursive style.

Mr. James J. Young
Project Manager
IL Asbestos Inspector No. 100-05203

Limitations and Service Constraints

LIMITATIONS AND SERVICE CONSTRAINTS

Asbestos Related Services

All professional opinions presented in this report are based on information made available to us either by review of data provided by others or data gathered by LFR personnel.

LFR affirms that data gathered and presented by LFR in this report was collected in an appropriate manner in accordance with generally accepted methods and practices. LFR cannot be responsible for decisions made by our client solely on the basis of economic factors.

Conditions described in this report are as found at the time of investigation, unless otherwise stated.

LFR analyzed only the substances, conditions and locations described in the report at the time indicated. No inferences regarding other substances, conditions, location or time can be made unless specifically stated in this report.

No recommendations were provided for materials containing less than one- percent asbestos. Materials containing less than one percent asbestos do not meet either the generally accepted industry definition of asbestos-containing material (any material containing greater than one percent asbestos) or the EPA definition of friable ACM (any material friable bulk insulation material contain greater than one percent asbestos by weight as analyzed by Polarized Light Microscopy.) LFR, however, makes no statement, implied or explicit, about the hazards of materials containing less than one percent asbestos.

This report is intended for the use listed in the section of this report described as the Introduction. The use of this report in any manner other than that listed in the Introduction requires the written consent of LFR. This report must be presented in its entirety.

Re: Freedom of Information Act

Dear Mr. John Chitwood:

This letter is in response to your Freedom of Information Act (FOIA) (5 ILCS 140/1 et seq.) request dated June 6, 2011 and received by the FOIA sector, Bureau of Land, at the Illinois Environmental Protection Agency (Illinois EPA) on June 6, 2011.

Following a search, the Illinois EPA determined there was no information in the Bureau of Land's records for the properties listed below.

Site Information
5742 & 5744 W BELMONT AVE, CHICAGO

Sincerely,

A handwritten signature in cursive script that reads "Thomas J. Reuter".

Thomas J. Reuter
FOIA Officer (Acting)
Illinois EPA

Comments: **Note:** *Effective immediately do not send a check or money order with your freedom of information request. You will be contacted regarding any reproduction cost.*

FOIA request re:

Addresses with information:

1. 5742 W. Belmont

Addresses without information:

2. 5744 W. Belmont

The Department of Environment can not search any addresses out side City Limits.

TO:

John Chitwood

You recently requested the City of Chicago's Department of Environment (CDOE) to search its files for information on the following:

5742 W. Belmont

At this time, and to the best of our knowledge, all information currently contained in CDOE's files regarding this address is enclosed. (CDOE was created on January 1, 1992. CDOE's Enforcement and Compliance Division formerly operated in the Department of Consumer Services; CDOE has inherited these files.)

In general, CDOE files include complaint/inspection/permit information in six areas:

- General Environmental (emissions, smoke, noise, etc.)
- Asbestos
- Hazardous Materials
- Underground Storage Tanks (USTs)
- Operational Compliance (permits for air-emission sources)
- Solid or Liquid Waste (recycling and handling permits)

If there is information in CDOE's files, it generally means that there has been a complaint resulting in a CDOE inspection, or that an annual permit is required from CDOE. If there is nothing in CDOE's files, it generally means CDOE has not received a complaint that resulted in an inspection, or that there is not a permit-requiring emission source. However, there may be problems CDOE has not been alerted to.

CDOE's information is from just one City of Chicago department. Other City departments (Buildings; Health; Water; Sewers; Streets and Sanitation; Zoning) and non-City agencies (Cook County; Illinois Environmental Protection Agency/IEPA; U.S. Environmental Protection Agency/USEPA) also may have separate information. None has information from the others; contact each separately.

Mail written request(s) and check(s) to CHICAGO DEPARTMENT OF ENVIRONMENT, or file request(s) by e-mail or in person:

Freedom of Information Officer - Larry Merritt
City of Chicago Department of Environment
30 N. LaSalle Street 2nd Floor
Chicago, Illinois 60602
312/744-7606 (FAX 312/744-6451)

Addresses must be specific. CDOE cannot search for "anything in a five-block radius of the intersection of such and such." Use a separate request form for each individual address being requested (e.g., 600,610,620,630, etc; not "the even side of the street for a block" or "the northwest corner of the intersection of such and such"). Indicate if, to your knowledge, there is an active complaint written by any City of Chicago agency currently pending regarding each address; or if there is any kind of litigation pending regarding the address, whether or not it involves the City of Chicago or not. Include your FAX number; if there is nothing in the CDOE files, it is easier to FAX an answer.

TO:

John Chifwood

City of Chicago

Department of Environment

You recently requested the City of Chicago's Department of Environment (CDOE) to search its files for information on the following:

5744 W. Belmont

Twenty-fifth Floor
 312 North LaSalle Street
 Chicago, Illinois 60602-2575
 312) 744-7606 (Voice)
 312) 744-6451 (FAX)
 312) 744-3586 (TTY)
<http://www.cityofchicago.org>

At this time, and to the best of our knowledge, CDOE files contain nothing at all on this address. (CDOE was created on January 1, 1992. CDOE's Enforcement and Compliance Division formerly operated in the Department of Consumer Services; CDOE has inherited these files.)

In general, CDOE files include complaint/inspection/permit information in six areas:

- General Environmental (emissions, smoke, noise, etc.)
- Asbestos
- Hazardous Materials
- Underground Storage Tanks (USTs)
- Operational Compliance (permits for air-emission sources)
- Solid or Liquid Waste (permits for recycling and handling)

If there is information in CDOE's files, it generally means that there has been a complaint resulting in a CDOE inspection, or that an annual permit is required from CDOE. If there is nothing in CDOE's files, it generally means CDOE has not received a complaint that resulted in an inspection, or that there is not a permit-requiring emission source. However, there may be problems CDOE has not been alerted to.

CDOE's information is from just one City of Chicago department. Other City departments (Buildings; Health; Water; Sewers; Streets and Sanitation; Zoning) and non-City agencies (Cook County; Illinois Environmental Protection Agency/IEPA; U.S. Environmental Protection Agency/USEPA) also may have separate information. None has information from the others; contact each separately.

Mail written request(s) and check(s) to CHICAGO DEPARTMENT OF ENVIRONMENT, or file request(s) in person:

Freedom of Information Officer - Iris L. Troutman-Heard
 City of Chicago Department of Environment
 30 N. LaSalle Street 25th Floor
 Chicago, Illinois 60602
 312/744-7606 (FAX 312/744-6451)

Addresses must be specific. CDOE cannot search for "anything in a five-block radius of the intersection of such and such." Use a separate request form for each individual address being requested (e.g., 600,610,620,630, etc; not "the even side of the street for a block" or "the northwest corner of the intersection of such and such"). Indicate if, to your knowledge, there is an active complaint written by any City of Chicago agency currently pending regarding each address; or if there is any kind of litigation pending regarding the address, whether or not it involves the City of Chicago or not. Include your FAX number; if there is nothing in the CDOE files, it is easier to FAX an answer.

Professional Geologist, NH

Professional Associations

National Ground Water
Association (NGWA)

Michael J. Baer, PG

Senior Geologist

As a Senior Geologist, Mr. Baer is responsible for developing, implementing and managing environmental projects for a variety of clients. He routinely manages the day to day oversight tasks on remedial construction project. Mr. Baer performs remedial investigations and prepares response actions; provides regulatory compliance activities and liaison services; performs remedial groundwater system operations and maintenance; and performs environmental site assessments.

Mr. Baer's geoenvironmental experience includes sample collection and analytical interpretation of soil and groundwater data, hydrogeologic investigations including pump tests and groundwater flow modeling, geophysical investigations, facility closures, development of remedial action alternatives and work plans, preparation of Field Sampling and Analysis Plans, management of soil excavation and dewatering projects, and design, construction, and operation duties associated with groundwater pump and treat systems.

Project Experience

Site Assessment

Sithe Mystic Development, LLC, Charlestown, Massachusetts

Directed and managed the completion of a detailed site assessment to characterize the nature and extent of contaminants at an active electrical power generating facility. This work included the completion of over 100 subsurface explorations (test pits, soil borings, and groundwater monitoring wells) from which soil and groundwater samples were collected. Based on the results of this investigation, and subsequent Remedial Design Selection Alternative solutions, a Method 3 Risk Characterization was completed. This work established clean-up criteria for a \$15,000,000 soil remediation project.

Groundwater Treatment Systems

Sithe Mystic Development, LLC, Charlestown, Massachusetts

Supervised the permitting, construction, and operation of several groundwater treatment systems required to complete the excavation of over 60,000 tons of oil-contaminated soil and other site construction activities. These systems treated groundwater flow volumes ranging from less than 50 GPM to as much as 500 GPM. The system designs were altered in order to maximize the removal efficiencies for contaminants of concern for each work application (e.g. No. 6 oil, volatile organic compounds, suspended solids and metals). Performed the required sampling and

completed the associated Discharge Monitoring Reports in accordance with United States Environmental Protection Agency (U.S. EPA) regulations.

Remedial Investigation and Feasibility Study (RI/FS)

Rhode Island Resource Recovery Corporation, Central Landfill Superfund Site, Johnston, Rhode Island

Served as Field Manager and supervised completion of three deep bedrock investigative boreholes at this 154-acre Superfund Site. The 8-inch diameter boreholes were completed through approximately 30 feet of unconsolidated overburden and 250 feet of granitic bedrock. Two of the boreholes were terminated after encountering a fracture zone containing dense nonaqueous phase liquid (DNAPL). Historical records indicated that approximately 1.5 million gallons of industrial/hazardous waste were disposed of in this landfill. Also assisted in the performance of a DNAPL recovery analysis at these locations.

Aqua Tank Farm and Kiefer Park Tank Farm Sites

Former Department of Defense (DOD) Site, North Kingstown, Rhode Island

Served as Field Manager and supervised and assisted in the recovery and field analysis of soil gas samples from over 150 sampling locations at Aqua and 120 locations at the Kiefer Site, both former military bulk fuel storage facilities. The work included both horizontal and vertical profiling and atmospheric response analysis. He developed the Work Plan, Field Sampling and Analysis Plan (FSAP) and Quality Assurance Project Plan (QAPP). Using the results of the Soil Gas study, Mr. Baer assisted in the development and implementation of subsurface remedial investigation of subsurface RI/FS.

CCL Custom Remediation Area

Peterson/Puritan Inc., Superfund Site, Lincoln/Cumberland, Rhode Island

Developed and directed the grouting of a deep bedrock borehole located within the CCL Custom, Inc. property limits. The well was installed by CCL Custom for a backup water supply source. CCL Custom is located within Operable Unit 1 of the Peterson/Puritan Superfund Site. The site encompasses an area of approximately two miles long and one-half mile wide on both sides of the Blackstone River. The contamination has been predominantly attributed to a 1974 release of approximately 6,200 gallons of perchloroethylene (PCE) to the ground from a rail car spill.

Developed a work plan approved by the U.S. EPA which specified grout mixtures and application techniques. Managed the grouting procedures and authored the final borehole closure reports.

Environmental Site Assessment and Remediation Project

Hillenbrand Industries, Inc., Rhode Island

Mr. Baer served as the Project Manager for this complex project, which began with a preacquisition environmental site assessment of a former industrial complex. The assessment included visual inspection, record reviews, installation of groundwater monitoring wells, test pits,

and sampling of soils and groundwater. During the assessment, an area of petroleum and chlorinated-contaminated soils resulting from historical on-site landfilling was discovered. A remedial investigation was conducted, which included a soil gas survey, installation of additional groundwater monitoring wells and soil borings, and a Remedial Action Work Plan was developed and approved by Rhode Island Department of Environmental Management (RIDEM). The buyer and seller negotiated the property transfer, and ESS then implemented the remedial action plan, which involved the excavation and off-site disposal of nearly 1,200 tons of hazardous and non-hazardous soils. The site was remediated to state-mandated clean-up levels and issuance of a Letter of Compliance by RIDEM.

Environmental Monitoring Program

Rhode Island Resource Recovery Corporation

Served as Project Manager for the Rhode Island Resource Recovery Corporation (RIRRC) Central Landfill Environmental Program for four years. In this position, ensured that all sampling schedules were met. Additionally, completed required reports and data maps, and communicated with RIRRC personnel regarding technical issues related to the project. This project required comprehensive sampling and reporting standards, including quarterly and annual statistical analysis of the resulting data from over 45 monitoring wells, surface water, and leachate samples. Groundwater levels from these locations were contoured on a quarterly basis to evaluate potential trends in contaminant migration.

Geophysical Investigations

New England Area

Performed various geophysical site investigations, including electromagnetic conductivity, GPR, resistivity, seismic, and very low frequency surveys, for the purpose of mapping lateral and vertical variations in subsurface physical features to determine potential contaminant plumes, fractures, bedrock lows/highs, buried tanks, piping and buried debris.

Hazardous Waste Part B Permits

Massachusetts and Rhode Island

Assisted in preparation of Part B permits for three hazardous waste treatment/storage/disposal facilities, two in Massachusetts and one in Rhode Island. Major responsibilities included mapping on-site waste management units and preparing facility-specific training, contingency, and emergency procedures plans and closure plans.

OSHA 40-Hour Hazwoper

John Chitwood, P.G.

Principal Geologist/Certified Project Manager

Mr. Chitwood has over 20 years of professional experience, including performance and management of subsurface and environmental investigations, and remedial activities at sites throughout the Midwest. This includes significant experience investigating subsurface conditions at former manufactured gas plant (MGP) sites. He has completed and managed numerous Phase I and Phase II environmental site assessments, reviewing historic and current site activities and identifying recognized environmental conditions associated with target sites. His duties include Location Leader and Site Evaluation and Remediation Department Management in ARCADIS' Elgin, Illinois office, and management of environmental due diligence, and soil and groundwater investigation and remediation projects. He has completed several Resource Conservation and Recovery Act (RCRA) preliminary assessments of active industrial facilities. Mr. Chitwood's experience also includes geotechnical investigation of bridge foundations and geologic surveys of highway right-of-ways. He manages an ongoing Illinois State Remedial Action Priorities List remediation project under the terms of a Consent Order between the State of Illinois and four respondents. Mr. Chitwood has successfully obtained No Further Remediation letters for many sites enrolled in the Illinois Site Remediation Program.

REPRESENTATIVE EXPERIENCE

- Mr. Chitwood is the Elgin Location Leader and an ARCADIS Certified Project Manager (CPM). As the Location Leader and CPM he completes both operations and project management tasks. General operations tasks include procurement of staff and office and project supplies, allocation of staff resources, operation and project budget tracking and approval, and backlog forecasting.
- Mr. Chitwood is managing the remediation of Volatile Organic Compound-impacted soil at a heavy industrial (paint coatings) manufacturing facility, under the terms of a Consent Decree negotiated between the respondents and State of Illinois. His duties include project management, direct supervision of the operation and maintenance of a soil vapor extraction system, emissions monitoring and reporting, groundwater monitoring and reporting, and annual progress evaluation via subsurface soil investigation.
- Mr. Chitwood used an innovative technology to remediate chlorinated hydrocarbon compounds in ground water at a regulated underground storage tank site in Illinois. Remedial actions included removal and disposal of residual source material, waste characterization, and implementation of an in situ groundwater remediation method to

cause reductive dechlorination of the chlorinated hydrocarbon compounds in groundwater.

- Mr. Chitwood has assisted several clients with due diligence assessments in support of property transactions. He has completed or supervised the completion of numerous (hundreds) ASTM-standard Phase I environmental site assessments and is an Environmental Professional in accordance with the U.S. EPA's All Appropriate Inquiry. Target sites included vacant, multi-dwelling residential, commercial, and industrial properties. Attorney-support services include review of third-party environmental plans and reports, and oversight of third-party environmental consultants. Due diligence tasks have been completed for a variety of facility types, including light industrial (notably for door manufacturing plants in Wisconsin), office, and commercial facilities.
- Mr. Chitwood has assisted clients with the removal of regulated underground storage tanks in accordance with the Illinois Leaking Underground Storage Tank program. Tasks completed include removal/closure management, subcontractor procurement, reporting (20-day, 45-day, low priority corrective action work plans, et. al.), and preparation and submittal of budgets for reimbursement from the Illinois Underground Storage Tank fund.
- Mr. Chitwood's experience also includes investigation and closure of contaminated sites via the Illinois Site Remediation Program (SRP). Tasks completed for the SRP Sites include regulatory negotiation, preparation of investigation work plans and completion reports, determination of remediation objectives, and preparation of remediation work plans and remedial action completion reports in accordance with 35 Illinois Administrative Code Parts 740 and 742, "Site Remediation Program" and "Tiered Approach to Corrective Action Objectives," respectively. Many SRP sites are closed via risk-based protocols that include modeling and implementation of appropriate barriers and controls to allow contaminated media to be left in place.
- Mr. Chitwood planned and completed preliminary subsurface investigations at several MGP sites in northern Illinois. Investigations were focused on visual identification of onsite source areas and subsurface coal tar contamination. Information gathered in each preliminary site investigation was used to assess site conditions and evaluate the need for further action at each site.
- Mr. Chitwood managed the investigation of a 3-acre MGP site enrolled in the Illinois Site Remediation Program. He prepared the quality assurance project and work plans for investigative efforts completed on the site and on adjacent properties. He supervised the field investigations and preparation of the remedial investigation report, including the baseline Tier 1 endangerment assessment. Mr. Chitwood evaluated remedial technologies to mitigate an isolated subsurface body of coal tar-contaminated soil identified near a river. Remedial technologies and recommendations were compiled in a technical memorandum. In addition, Mr. Chitwood supervised the preparation of a Tier 3 risk evaluation to assess potential risk to human health and establish cleanup objectives for surface soil.
- When oily- and coal tar-like substances seeped from the bank of a river near an MGP site, Mr. Chitwood directed a limited response action to halt the release. The response action included removal of impacted soil and placement of an interim barrier to halt the release

until the source could be mitigated.

- Mr. Chitwood served as Site Manager for U.S. EPA oversight of a remedial investigation of a former oil-recycling site conducted by a potentially responsible party. He developed budgets and prepared a work plan, quality assurance project plan, and a health and safety plan required to complete U.S. EPA oversight tasks. Mr. Chitwood provided technical assistance to the U.S. EPA, including review of Remedial Investigation/Feasibility Study reports and various technical memorandums produced by a PRP consultant.
- Mr. Chitwood has supervised approximately 50 U.S. EPA Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) site-screening inspections, and several U.S. EPA RCRA preliminary assessments and visual site inspections (PA/VSI) of industrial facilities. The sites included landfills, agri-chemical distributors, wood-preserving facilities, former and existing manufacturing facilities, and municipal water wells. For several CERCLA sites, Mr. Chitwood calculated preliminary ranking evaluation scores (PREScore) which the U.S. EPA used to rank the Sites for potential listing on the National Priorities List.
- Mr. Chitwood has extensive drilling and Superfund oversight experience in the U.S. EPA Region V states. He provided U.S. EPA oversight at several Superfund sites, some of which included installation of deep nested monitoring wells. He has experience logging soil and rock via hollow stem auger and wash rotary drilling methods.

PROFESSIONAL HISTORY

- ARCADIS., Principal Geologist and Location Leader, 2010 to date
- LFR Inc., Operations Manager, 2004-2009
- LFR Inc., Senior Geologist, 2002–2009
- LFR Levine-Fricke, Senior Project Geologist, 2000–2002
- CADDIS Inc., Senior Project Manager, 1999–2000
- LFR Levine-Fricke, Project Geologist, 1997–1999
- Black & Veatch, Project Geologist, 1991–1997
- Kansas Department of Transportation, Geologist, 1989–1991
- Kansas State Board of Agriculture, Hydrologist, 1988–1989

Education

MS, Geology, New Mexico

Morgan L. Vogt

Senior Staff Geologist

Ms. Vogt is a Senior Staff Geologist in ARCADIS' Elgin, Illinois office. She has comprehensive experience in the field of geology and environmental geosciences, including Phase I and Phase II Environmental Site Assessments (ESAs), soil and groundwater monitoring, oversight of underground storage tank (UST) removal, site remediation including soil removal and soil vapor extraction (SVE) systems, National Environmental Policy Act (NEPA) compliance on roadway and water system construction and improvements, and inspecting properties for suspect asbestos-containing building materials (ACBMs).

Project Experience

Phase I Environmental Site Assessments

Performed over 80 Phase I ESAs for various commercial clients and government agencies in Illinois, Indiana, Missouri, Michigan, Minnesota, Ohio, Tennessee, Georgia, West Virginia, New Mexico, Texas, and Arizona. Properties have included vacant properties, agricultural properties, commercial/retail properties, government buildings, and industrial/manufacturing plants. Phase I ESAs completed in accordance with the United States Environmental Protection Agency (USEPA) All Appropriate Inquiries (AAI) rule and the American Society for Testing and Materials (ASTM) E-1527-05 standard.

Phase II Environmental Site Assessments

Managed Phase II sampling projects for various clients in Illinois, Indiana, New Mexico, Texas, and Arizona. Soil and groundwater investigations have been completed on vacant properties, agricultural properties, commercial/retail properties, industrial/manufacturing plants, and government properties. The investigations were completed to assess concentrations of volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), concentrations of arsenic, barium, cadmium, chromium, lead, mercury, selenium, and silver, polychlorinated biphenyls (PCBs), and herbicides/pesticides.

Underground Storage Tank Investigations

Oversight of the removal of USTs at sites in Illinois, New Mexico, Texas, and Arizona. Collected soil and groundwater confirmation samples as needed to demonstrate compliance with applicable regulations.

Soil and Groundwater Monitoring

Oversaw the installation of monitoring wells at various sites in Illinois, Indiana, New Mexico, Texas and Arizona, including collecting soil samples, documenting soil boring lithology, drafting soil boring diagrams and monitoring well completion diagrams, and writing minimum site assessment reports. Performed groundwater monitoring, including collecting water samples, measuring depth to groundwater, gauging wells for non-aqueous phase hydrocarbon liquid (NAPL), drafting potentiometric surfaces and contaminant maps, and writing groundwater monitoring reports.

Site Remediation

Performed SVE pilot testing, drafting conceptual remediation plans for SVE systems, and monitoring SVE systems at various sites in New Mexico. Additionally, oversaw the removal of contaminated soil and collected confirmatory soil samples at various sites in Illinois, New Mexico, Texas and Arizona.

NEPA Compliance

Performed Federal agency consultations for NEPA compliance on environmental engineering projects in New Mexico and Arizona, such as roadway and water system construction and improvements. Wrote numerous NEPA reports for various funding agencies, including the United States Environmental Protection Agency (USEPA), the United States Department of Agriculture Rural Development (USDA RD), and the Border Environment Cooperation Commission (BECC).

Asbestos Inspections

Performed asbestos inspection surveys in conjunction with Phase I ESAs at various sites in Illinois, Indiana, Missouri, Michigan, Minnesota, Ohio, Tennessee, Georgia, West Virginia, New Mexico, Texas, and Arizona. Performed site walk-through of multiple buildings in Illinois and Indiana to identify and collect suspected ACBMs, along with logging their locations, conditions, and quantities.
