COMPLAINT:

01 The tailings slip clutch is going off. Fred cannot spin the shaft.

CORRECTION:

Drove to the field and found why the tailings elevator slip clutch is slipping. Found part of a discharge beater grate stuck in the upper tailings auger. I removed the piece of grate. I then checked the combine for internal damage and found sever damage in the discharge beater area. This is more damage than can be repaired in the field during harvest. I sent the combine in to the shop for repairs.

COMPLAINT:

01 SERVICE CALL: Upper variable speed cylinder is wobbling. Diagnose and repair.

CORRECTION:

Hours Engine 2748 Separator 1982 Drove to the customers. Removed the shields around the upper feeder house variable speed. Found that the bracket that holds the variable speed was broke. Removed upper variable speed and found that the cogs were worn off. The feeder house drive belt was also shredded and the feeder house position sensor rod was ripped off. Installed new bracket for the upper variable speed. Did not have the shieve and hub to install or the feeder house drive belt on hand. Returned to the shop and returned tot he customer's in the morning with the new outer shieve and the new inner hub. Pressed the bearings in the sheive and the hub at the shop. Installed the upper variable speed assembly. Installed the new feeder house drive belt. Reinstalled the feeder house variable speed belt. Test ran the machine and the feeder house variable speed belt was jumping around. Removed the old feeder house variable speed belt and installed a new variable speed belt. Test ran the machine again and ran a lot smoother. Installed all the shield on the machine. Returned to the shop.
